

README.md

Study Sprint Delivery

This delivery folder contains the final Study Sprint apk file, report, project vision, source code, demo video, and supporting appendices.

Examiner Login Credentials

We have included 'Appendices/examinerCredentials.txt' so the examiner can log in to the app without needing to register and confirm new accounts manually.

The file contains credentials for two prepared users:

- **Populated user**: an account with existing subjects, assignments, tasks, completed sprint sessions, and history. This lets the examiner quickly inspect how the app looks and behaves when it has already been used for study planning and focus sessions.
- **Fresh user**: a newly created account with only email confirmation completed. This lets the examiner inspect the first-time user experience without going through registration or email confirmation.

These accounts are included to make assessment faster and more reliable. The examiner can test both the empty starting state and a realistic in-use state of the application.

Included Files

- 'studysprint.apk': Android application package.
- 'report.pdf': final project report.
- 'projectVision.pdf': project vision document.
- 'source/': application source code.
- 'Appendices/': appendix material including examiner credentials, work notes and commit history.
- 'video.mp4': Demo video of the app and its functions.
